Getting help with Remote Support

What to do when you call for help and your technician connects to your computer with Remote Support. You stay in control the whole time.

1 Open the app

Double-click the **Remote Support** shortcut on your desktop (1), or type **Remote Support** into the Windows search box (2). It may also be running already: look for its icon near the clock (3). On a Mac, open **RustDesk** from Applications.

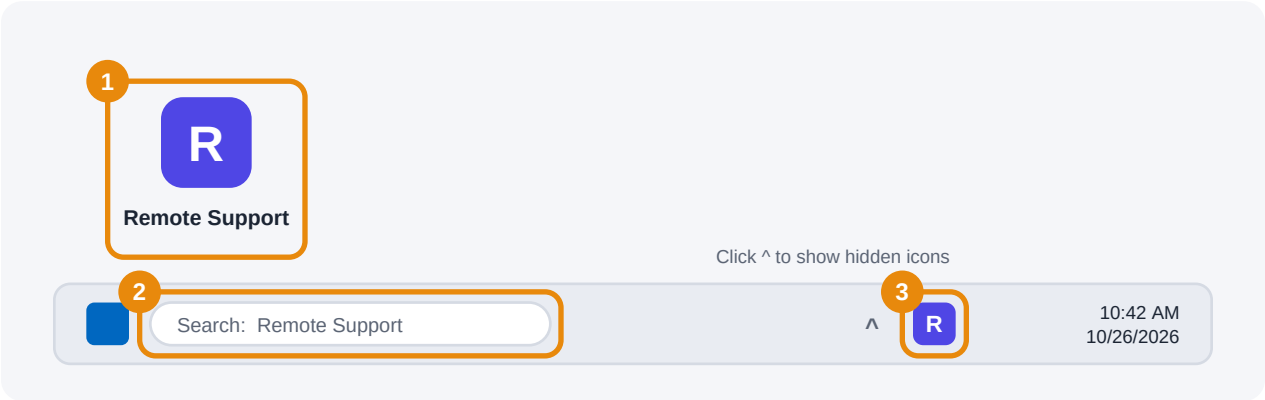

Illustration. Your screen may look slightly different.

2 Read your ID to your technician

Your **ID** is the 9-digit number under **Your Desktop** (1). Read it out when your technician asks for it. It never changes for this computer, so you can write it down here:

My ID: ___ ___ ___ ___ ___ ___ ___ ___ ___

Check that the bottom corner says **Ready** with a green dot (2). If it says anything else, check that the computer is connected to the internet.

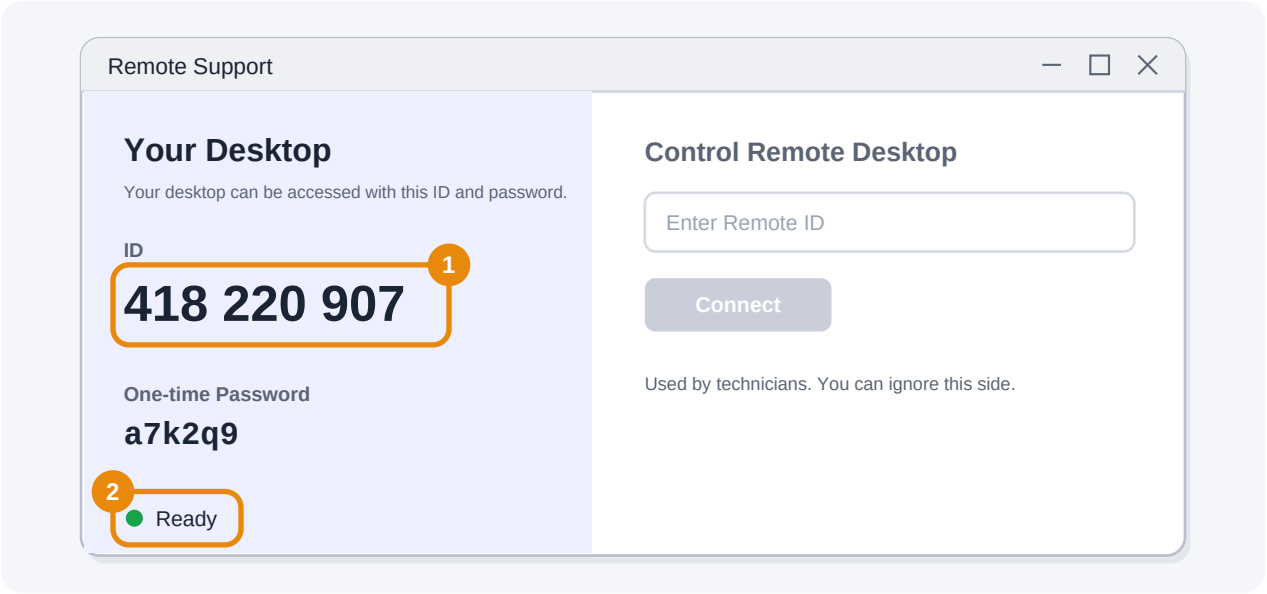

Illustration with an example ID (418 220 907). Your screen may look slightly different.

3 Accept the connection

A small window shows who is connecting. If you are expecting them, click **Accept** (1). If you don't recognise the name, or nobody told you to expect a connection, click **Dismiss** (2) and call your IT support provider.

Your IT provider may have set up this computer so technicians can connect without you clicking Accept, for example to fix it after hours. You still see this window for as long as they are connected.

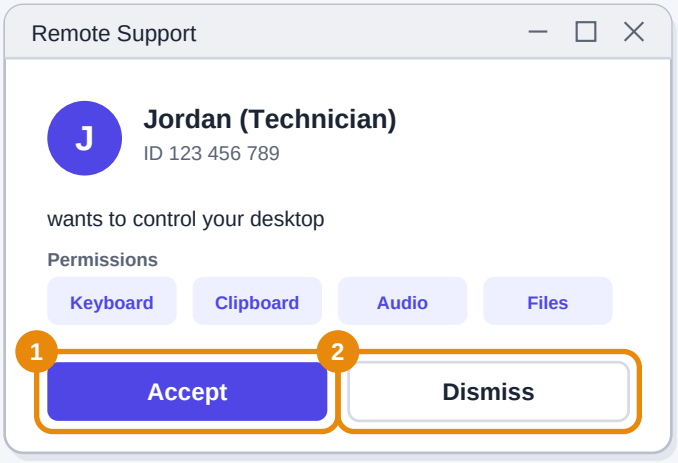

Illustration. Your screen may look slightly different.

4 During the session

You see everything the technician does: the mouse moves on its own and windows open and close. Try not to use the mouse or keyboard at the same time unless they ask you to.

Your technician will never ask you to read out a password over the phone. If they need you to type one, type it yourself.

5 End the session

Your technician disconnects when they're done. You can end it yourself at any time by clicking **Disconnect** (1) in the small window. Closing that window also ends the session.

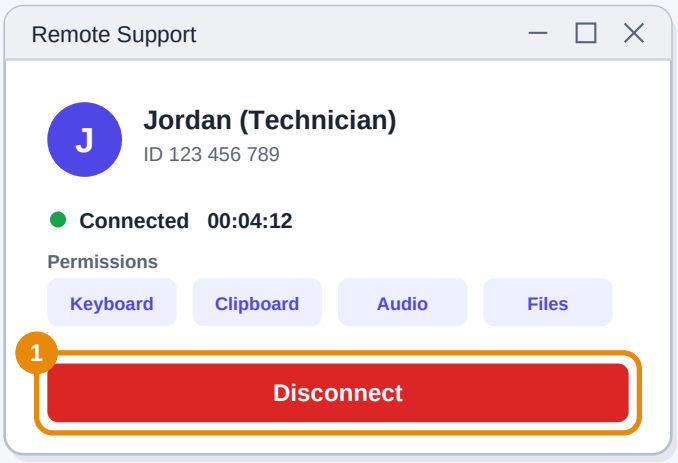

Illustration. Your screen may look slightly different.

Your privacy and control

- Only your IT support provider's technicians can connect, and only to computers where their version of the app is installed.
- Every connection is logged on their side: who connected, when, and for how long.
- While someone is connected, the session window stays on your screen. Disconnect ends it immediately.
- To remove the app, contact your IT support provider first, because they use it to look after this computer.

If something goes wrong

If this happens	Try this
I can't find the app	Search for Remote Support or RustDesk in the Windows search box, or in Applications on a Mac.
My technician can't connect	The computer must be switched on, awake and online. Make sure it isn't asleep or shut down.
The screen goes black or the mouse doesn't move on a Mac	Screen recording or Accessibility permission is off. See step 4 of the installation guide.
